

## Script per user testing – ENGLISH VERSION

**Hello, <participant's name>.**

My name is <facilitator's name> and today we are here to test the website, not you!

Before starting, please fill in this document to give us permission to record the test session for research purposes.

**<consent form>**

Before beginning the activity, we ask you to complete this short questionnaire.

**<pre-test questionnaire>**

During the test, we will ask you to think out loud while using the prototype. This means saying what you are looking at, what you are trying to do, and what goes through your mind while performing the actions.

There are no right or wrong answers, and we are not evaluating you, but the prototype. If something feels unclear, confusing, or different from what you expected, please say it freely.

If at any point you stop speaking, we will simply remind you to keep sharing your thoughts.

Before starting, we will show you a short video (about one minute) explaining what thinking out loud means during the test.

[Demonstrate Thinking Aloud by Showing Users a Video - NN/G](#)

**[START recording]**

### **TASK 1**

*You have just arrived at university and would like to have a point of reference to talk to. Use StrandU to find your buddy.*
